Chemical Solutions for Today's Challenges

American Research Specialty Products

American Research Specialty Products: Modern Chemical Solutions for Solving Today's Challenges

American owned and operated for over 35 years, providing national service, we develop, research and manufacture in Southern California. We specialize in providing a comprehensive line of metal working fluids and lubricants, industrial cleaners and pretreatment chemicals, aqueous surface cleaners for ferrous and non-ferrous metals, and industrial/commercial laundry chemistries. Our focus is to provide the best chemical solutions and service possible to help our customers gain and maintain a competitive advantage while preserving our commitment to the health, safety and protection of our environment.

CUTTING OILS

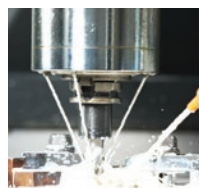

AMERILUBE 1003 is formulated to provide extreme lubricity that will outperform conventional petroleum based products, and will not stain in heat treat applications. Designed for the protection of our environment it is non-hazardous with low VOC levels.

AMERILUBE XD286 286 is formulated for extreme service and heavy duty applications. Using natural raw materials, it meets or exceeds today's environmental laws and regulations.

AMCUT 135S is a heavy duty straight oil for cutting and grinding of ferrous metals. Formulated with premium quality base oils it provides high metal removal rates and excellent anti-oxidation characteristics.

COOLANTS

SYNTEC 9288C is a non-chlorinated high performance micro emulsion cutting and grinding fluid. Formulated for the most difficult ferrous and non-ferrous alloys it will provide increased boundary lubrication ensuring excellent part finishes and reduced coolant drag-out.

TUBEFORM 507 is a synthetic mill coolant specifically designed for manufacturers of

structural and light gauge tube products. Formulated to provide excellent rust and corrosion protection and with a strong biocide package it will provide extended sump life in large volume central systems. It is designed for the easy removal of mill scale, metal fines and tramp oil with all methods including high speed centrifuges and cyclonic separators.

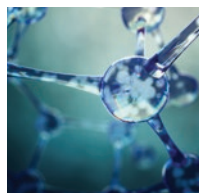

PROTECTANTS

PROTECTSOL 427 is a water-displacing corrosion/rust preventative for use on ferrous and non-ferrous metal surfaces that will quickly displace water from metal surfaces. Easily applied and with a thin, non-staining and transparent film it will provide up to 12-months indoor storage protection against corrosion and rust.

PROTECTSOL 512CA is an oil-based water-displacing corrosion/rust preventative for use on ferrous and non-ferrous metal surfaces that will provide up to six-months indoor storage protection against corrosion and rust. Easily applied it will form a thin, non-staining and transparent protective film.

INDUSTRIAL CLEANERS

AMERISOLVE 123 is an eco-friendly solvent formulated for industrial cleaning applications and vegetable oil resin cleanup.

AMERICLEAN 30 MPA is a heavy duty alkaline cleaning solution that will quickly combine with water. It is formulated for low temperature applications and is effective in immersion, ultrasonic and power spray washers.

INDUSTRIAL LAUNDRY

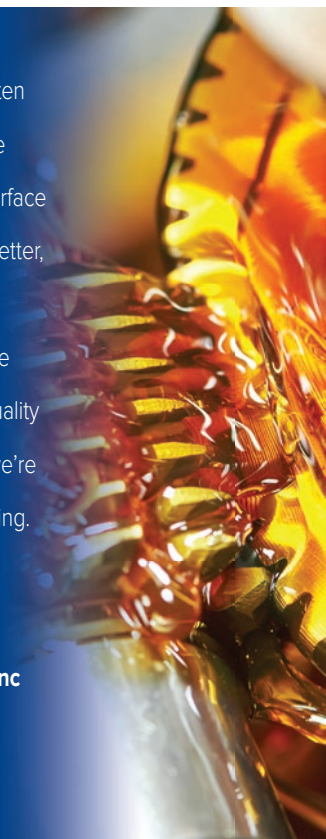

A complete line of commercial laundry

chemistries designed to remove greases and stains in warm or cold water. Benefits include reduced formula times and extended linen life.

"With Amerilube, we're often getting one hundred more parts per tool. Plus, the surface finishes are significantly better, too. And Amerilube 30 is "Super Compliant" with the Southern California Air Quality Management District so we're exempt from record keeping. We like that a lot."
